Life Style Ceramics

Installation Guide

Hand Dryer Mounting

1. Confirm the mounting wall can bear the unit's weight; use wall anchors suited to the wall material (masonry, drywall, etc.).
2. Mark and drill fixing holes using the template supplied with the unit, typically at 1000–1200mm from finished floor level.
3. Run a dedicated electrical supply to the mounting point, isolated at the distribution board before work begins.
4. Secure the back plate to the wall using the supplied fasteners, checking it is level.
5. Connect the electrical supply to the terminal block inside the unit, following the wiring diagram in the box.
6. Mount the outer cover onto the back plate and secure with the integrated locking screw.
7. Restore power at the distribution board and test operation using the sensor or activation button.
8. Confirm airflow and automatic shut-off timing are within the manufacturer's stated range.

Safety Notes

Electrical connection must be carried out by a qualified electrician in line with local wiring regulations. Isolate power before opening the unit for servicing.
